

Task

Create a function that accepts two values, **a** and **b**. Add code to print three lines where:

The first line contains the sum of the two numbers.

The second line contains the difference of the two numbers (first - second).

The third line contains the product of the two numbers.

Conditions:

If any of the results are zero, print "zero" as the result instead of 0

Note: be sure to include useful info printed out, not just the result

Example 0

a=3

b=5

Print the following:

A + b = 8

A - b = -2

A * b = 15

Example 1

a=3

b=3

Print the following:

A + b = 6

A - b = zero

A * b = 9
